

Tame your organization's email use

Policy Patrol Enterprise addresses the pain points of email use: spam, phishing, large attachments, inappropriate use, a need for content-driven automatic disclaimers and signatures, archiving requirements, content security, confidentiality concerns, reputation and brand protection, and prevention of legal issues involving email. Policy Patrol Enterprise is easy to install and configure, and its powerful rules wizard allows you to create customized user-based rules by specifying conditions, exceptions and actions. Policy Patrol is at work in the smallest offices and in the largest corporations, filtering emails for more than 350,000 users worldwide.

Policy Patrol Enterprise 5

Get it all in one package!

Reduce Liability | Ensure Compliance | Increase Productivity | Optimize Network Use

With Policy Patrol Enterprise you get:

Policy Patrol Archiver, Zip, Disclaimers and Spam Filter, plus:

- Advanced Content Security
- Email policy management

System requirements

- Windows 2000/2003 or Windows XP Professional.
- Microsoft Exchange 2007/2003/2000/5.5, Lotus Notes/Domino or other mail server.
- Microsoft .NET Framework

Immediate spam relief

Policy Patrol Enterprise ships with a default configuration that will start blocking spam within seconds after installation and empowers users to manage their own spam. With the daily quarantine report, users will never miss a legitimate email again. Users can quickly skim through the list of newly quarantined messages from within Outlook and deliver emails or white list addresses. By making use of rules, you can configure different spam management options according to the technical proficiency of the user (only available in the Enterprise edition).

Disclaimers, signatures & branding

Add the right language to the right emails—automatically. Policy Patrol Enterprise includes advanced options that allow you to add the disclaimer or signature just right for your organization. Disclaimers & signatures can be user-based and can include logos and user merge fields. In addition, you can add custom branding to your emails conveying a professional image.

Compression at the server level

Policy Patrol Enterprise allows you to compress and decompress your users' email attachments at the server level—without any user intervention. This provides the advantages of compression without user hassles and the lost productivity zipping and unzipping files.

Email archiving

Need a backup of your emails? Want to recover a deleted email? Policy Patrol Enterprise offers email archiving to a Microsoft SQL Server database and allows you to retrieve and restore messages to your mailbox.

Ensure a safe work environment*

Let Policy Patrol protect your employees by screening emails for inappropriate or discriminatory content. Although most email filters only check external mails, Policy Patrol can also content check internally sent emails (when installed on Exchange Server 2000/2003/2007), which are frequently the culprit in safe work environment law suits.

Monitor email policy violations*

View reports on which users breached which email policy rules and when. Configure rules to automatically notify employees and managers when breaches occur and optionally place employees on a warning list.

Block illegal or offensive emails from leaving your network*

Protect your company from libel and other law suits by checking emails before they are sent out. Automatically block emails with offensive or illegal words and send a message report of intercepted emails to managers for review.

Protect against dangerous attachments & viruses*

Check emails for dangerous attachment types and automatically block or add a warning to emails with a tag or disclaimer. Use the Kaspersky Anti-virus add-on (optional) to prevent viruses from reaching your mailbox or leaving your organization.

* These features are only available in the Policy Patrol Enterprise edition.
